

Life Expectancy Vs GDP per Capita

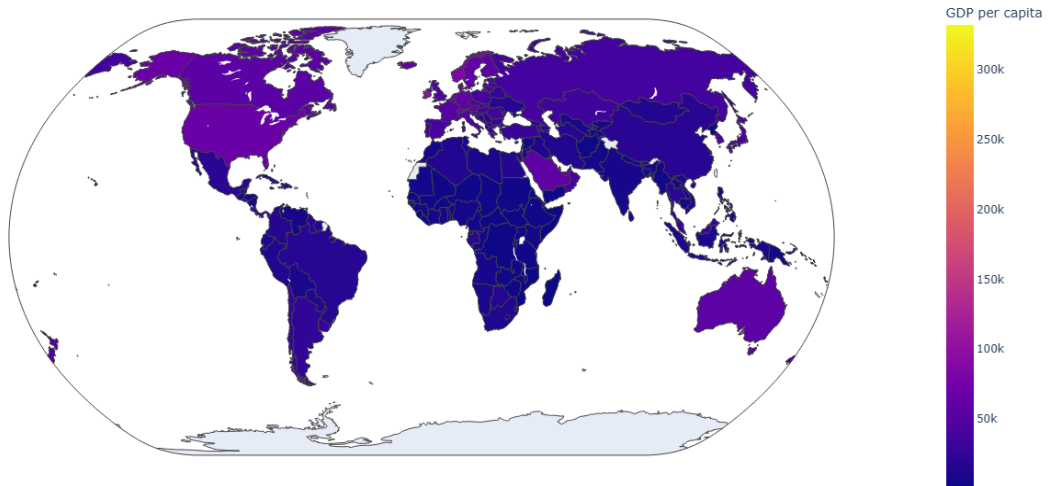

Lalomilo Varea

18/05/2026

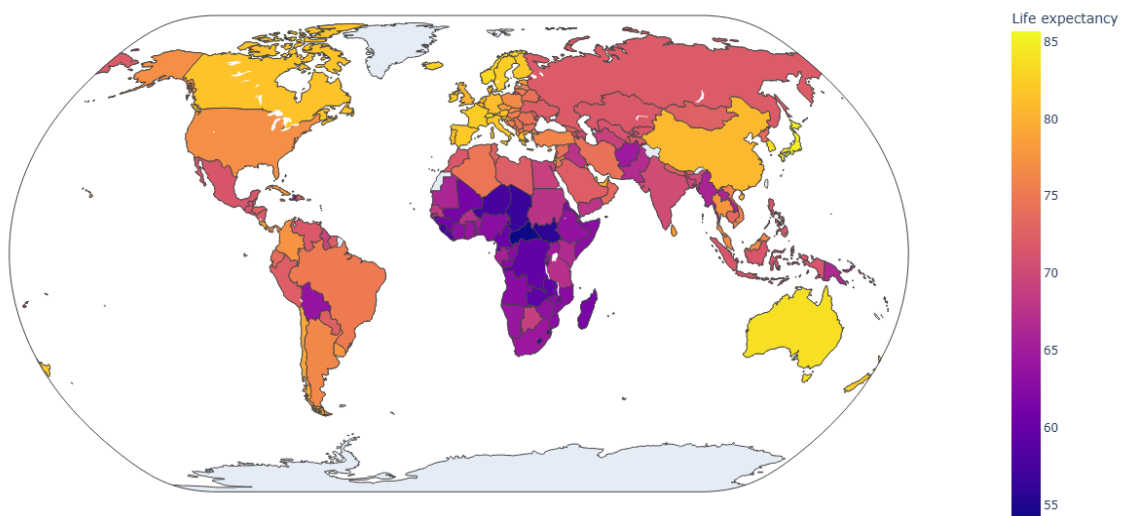

Relationship summary

- The relationship between GDP per capita and life expectancy in 2020 is positive.
- Using raw GDP per capita, the Pearson correlation is **0.575**.

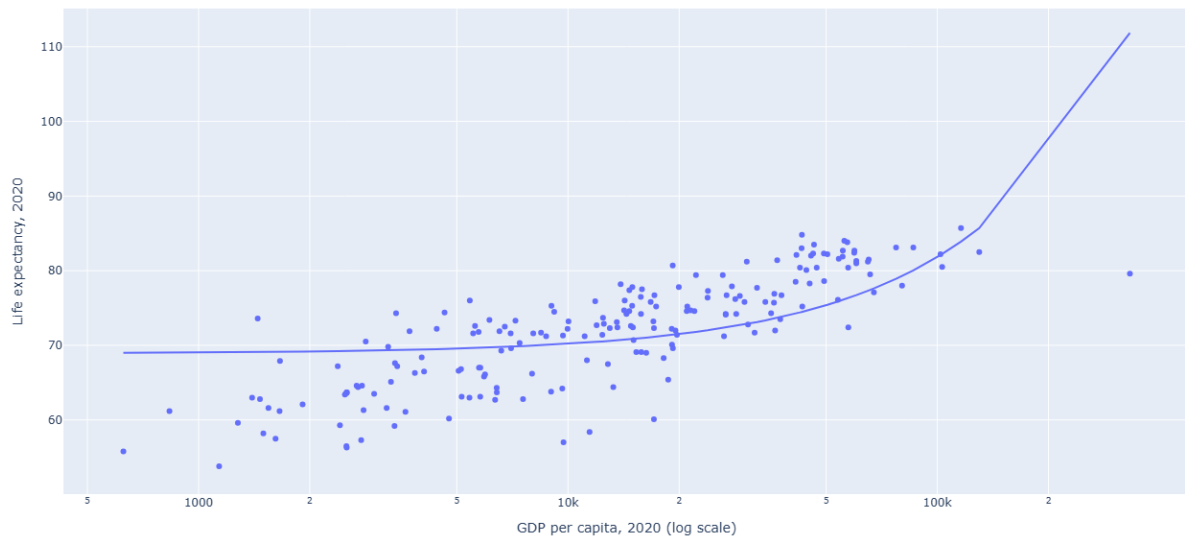

GDP per Capita by Country, 2020

Life Expectancy by Country, 2020

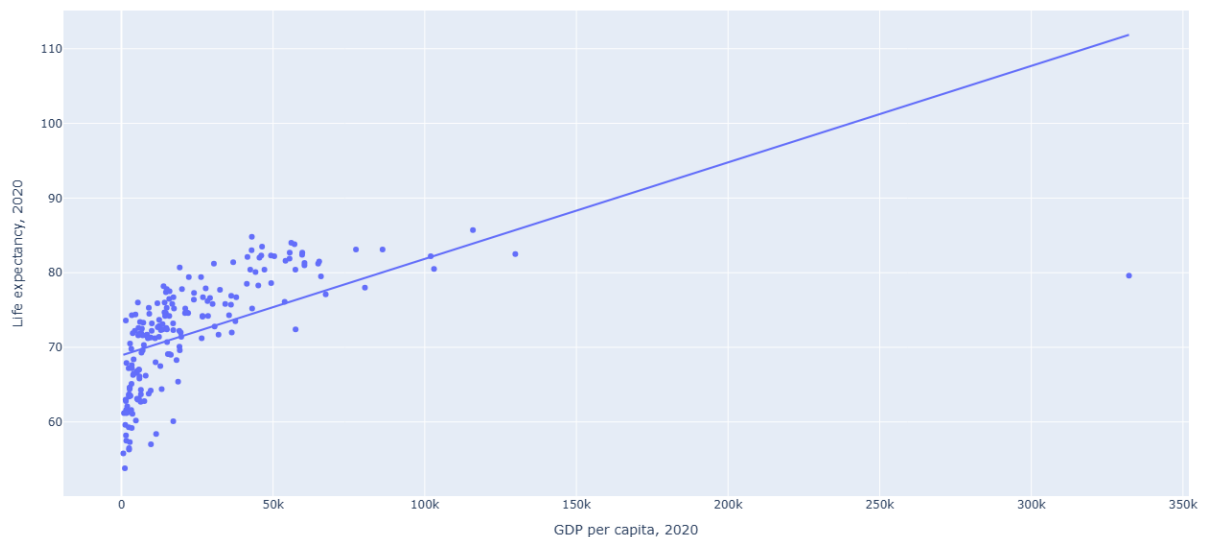

Relationship Between GDP per Capita and Life Expectancy, 2020

Using log GDP per capita, the Pearson correlation is stronger at **0.829**, which suggests a curved relationship: life expectancy rises quickly as GDP per capita increases at lower income levels, then levels off among higher-income countries.

Relationship Between GDP per Capita and Life Expectancy, 2020

Countries with higher GDP per capita generally have higher life expectancy, but the pattern is less visually tight on the linear scale because GDP per capita is highly spread out among richer countries.

Reflections

Overall process is pretty simple to follow. If anything, this activity highlights the need for more specific and concise prompts to get valuable results. ChatGPT does all the coding which is great although designs leave much to be desired and may require further prompt. The notion that different models handle specific type of prompts better depending on context was a good learning. In this case, the thinking model for ChatGPT is ideal and best for data analysis compared to other GPTs. Consequently, this was probably the only difficulty I encountered in this exercise by proxy to my group members
